## **DETAILED ACTION**

### ***Claim Objections***

1. Claim 1 is objected to because of the following informalities: on line 4 of the claim, "greater" should be "higher" to be consistent with the claim language of dependent claims 2 and 10. Appropriate correction is required.
2. Claim 2 is objected to because of the following informalities: on lines 1-2 of the claim, "the predetermined power level" should be "the second predetermined power level". Appropriate correction is required.

### ***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
4. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claim should be worded to make it clear that the pilot signal is first transmitted at a second predetermined power level, and then transmitted at a power level higher than the second predetermined power level, if this indeed is Applicant's intended meaning.
5. Claim 6 recites the limitation "the second signal" in line 2 of the claim. There is insufficient antecedent basis for this limitation in the claim.

### ***Double Patenting***

6. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

7. Claims 1-6 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-5 of U.S. Patent No. 6,567,391.

Although the conflicting claims are not identical, they are not patentably distinct from each other because they both teach transmitting a pilot signal at a predetermined power level and transmitting the pilot signal at a power level higher than the predetermined power level for a predetermined time period. Claim 1 of the instant application is obvious over claim 1 of the patent as the instant application teaches that the base station is transmitting the pilot signals whereas the patent teaches that a mobile station is transmitting the signals. The modification is obvious as they are both transceivers. Further dependent claims 2-6 of the instant application are obvious over claims 2-5 of the patent as they both teach transmitting the pilot signals using orthogonal spreading

codes and that the predetermined time period covers a boundary of consecutive data frames.

***Allowable Subject Matter***

8. Claims 8, 10, and 96 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Moon et al., US Patent Number 6,577,608, disclose a communication control device and method for CDMA communication system.
